

GET BETTER BLOOMS

# WHAT'S IN MY FERTILIZER?

## NITROGEN (N)

This element in fertilizer encourages green, leafy growth in your plants. It's more important in the summer months rather than the dormant ones.

## PHOSPHORUS (P)

This is an important element for root development in your plants. This is important for new plants so they can get a good root foundation.

## POTASSIUM (K)

This element helps to maintain hardiness in your plants and grass. This is usually the main, sometimes the only ingredient in winter fertilizers.
